Wiring Diagrams for the "On-Board-Receiver" (ART-5490)

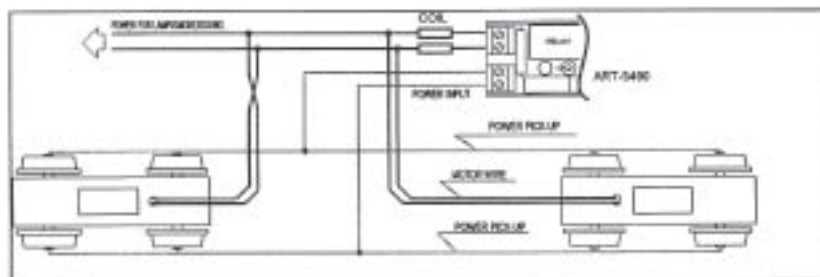

(2-4-2 ROGERS LOCOMOTIVE)

TYPICAL WIRING DIAGRAM FOR OTHER LOCOMOTIVES

Note:

Please note that it is important that the output wires, from the receiver to the motor, be dressed away from the receiver unit. It is also important that the antenna wire be kept away from power sources, including but not limited to motors, sound systems and their speakers, and other printed circuitry. All of the wires should be held in place with tape in order to keep them from shifting.

*PCB: Printed Circuit Board
